Safety Precautions

Please read these simple guidelines. Not following them may be dangerous or illegal. For further information, see the section of "Safety information".
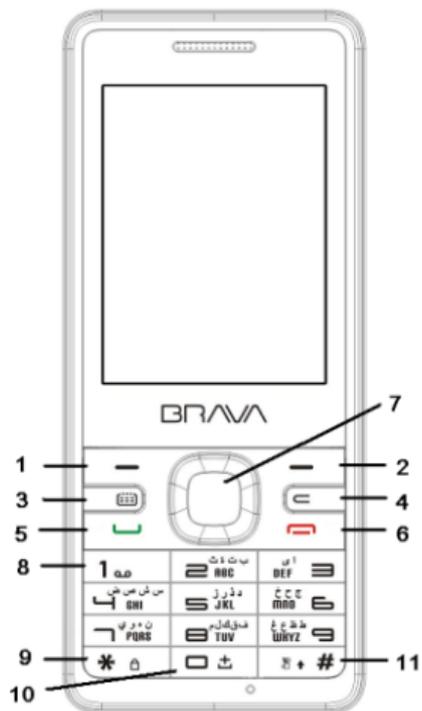

!	Do not switch the phone when the use of mobile phone is prohibited or may cause interference or danger.
	Do not place your phone and its accessories in containers with strong electromagnetic field.
	Obey all local laws. Always keep your hands free to operate the vehicle while driving. Your first consideration while driving should be road safety.
	Hospitals or health care facilities may be using equipment that could be sensitive to external radio frequency. Follow their regulations or rules.
	Do not use the phone at a refueling point. Do not use near fuel or chemicals.
	Follow any restrictions. Wireless devices can cause interference in aircraft.
	Keep the phone and all its parts, including accessories, out of the reach of small children.
	Use only Brava approved batteries and chargers. Disconnect the charger from the power source when it is not in use. Do not leave the battery connected to a charger for more than a week. Please remove the battery only after the phone is switched off normally, otherwise it could cause unpredictable damage for the phone.

1 Getting to Know Your Phone

2 Getting Started

Insert the battery

Before battery replacement, please confirm you have switched off the phone.

Insert UIM card:

1. Before UIM card installation or replacement, please make sure you have switched off your phone and taken the battery out.
2. Make the metal magnetic strip of the UIM card contact with the metal strip, and place it in the slot.

Charging the battery

1. Before charging, please confirm you have correctly installed the battery into the phone.
2. Plug the charger port into the jack and then connect the charger with AC power.
3. If the phone is off during charging, the screen will display the charging animation. When the phone is on, the user may use the phone during charging. When the charging is completed, the charging animation on the screen will stop in full-capacity state of the battery. Please use the phone when the battery is fully charged after the power is completely used up for the first time; charge it after the power is completely used up for the second time, as a result, the battery will reach the best state after three consecutive cycles.
4. When the battery is low, the battery icon will be empty and the phone will give an alert. On this occasion, you cannot use some functions. You should charge the

battery in order to use the phone normally. If the battery is too low, the phone wil shut down automatically.

Warning: please do not move or remove the battery during charging to avoid severe burning of the phone circuit.

Power on/off the phone

When power is sufficient, press and holds the power key for 2 seconds to power on the phone. If you have activated a password, you will be prompted to enter it. Normally the phone will be ready for use as soon as you enter idle screen. When the phone is power on, press and holds the power key for 2 seconds to power off.

3 Basic Functions

Lock/Unlock keypad

You can add numbers to the list or select from contacts and call history. Added numbers to the list will not be able to reach you while black list status is on.

17 Maintenance Guideline

Welcome to using **E-SOLO CS-585 from Brava**. If there is any problem while using your mobile phone, please check according to the following table otherwise contact the nearest Brava customer service center to you.

FAQ	Item to be checked
The telephone does not charge properly	Make sure that the charger is correctly connected to the phone and the power socket. Make sure you are using a charger specifically designed for this phone.
The phone does not switch on	Check the battery charge level. Make sure the battery is properly installed. Press and hold the ON key until the screen comes on.
Unable to dial a number	Make sure you have dialled a valid phone number. Check if your phone is connected to the network.
Poor sound quality	Check if the reception signal is strong enough. If you are inside a building, rotate the phone or move close to a window.
The other party cannot hear you during a call	Make sure the mouthpiece is not blocked.
The receiver volume is low	Check if the receiver volume is set to maximum.

FAQ	Item to be checked
The phone signal is poor or switches off frequently	Make sure the phone antenna is not damaged. Check the phone signal strength. If there is no signal, use your phone in a location where the signal is strong.
The phone displays "out of network" or "network failure".	Check if you are in an area where the signal is weak (in a tunnel or surrounded by building). Move to another location and try again. Make sure you are not trying to use a service that you haven't subscribed to. If you require this service, contact the network for details.
When you cannot connect to the network normally	(1) The network provider does not provide this service or you have not subscribed to this service. Please contact your provider for details on the subscription and use of these services. (2) Incorrect setting. Please set the correct parameters

18 Safety Information

Electronic Device

Most modern electronic equipments are shielded from radio frequency (RF) signals. However, certain electronic equipment maybe is not shielded against the RF signals from your Mobile Phone. Consult the manufacturer to discuss alternatives.

Hospital

- Do not take your phone into the operating room (OR), intensive care unit (ICU), or coronary care unit (CCU).
- Do not use your phone at places for medical treatment where it is prohibited to use mobile phones.
- When you use your phone near someone who is suffering from a heart disease, turn down the ring tone volume or turn Vibrate mode on, so that it does not influence the person.

Storage Environment

- Switch off your phone when you are in any area with a potentially explosive atmosphere, and obey all signs and instructions. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death.
- Users are advised to switch off the phone at a refueling point (service station). Users need to observe restrictions on the use of radio equipment in fuel depots (fuel storage and distribution areas), chemical plants, or where blasting

operations are in progress.

- Areas with a potentially explosive atmosphere are often (but not always) marked clearly. They include the areas below decks on boats, chemical transfer or storage facilities, vehicles using liquefied petroleum gas, such as propane or butane, areas where the air contains chemicals or particles, such as grain, dust or metal powders, and any other area where you would be advised to turn off your vehicle engine.

Children Safety

- Put your phone, battery, and charger in places beyond the reach of children. Do not allow children to use the phone, battery, or charger without guidance.
- Do not allow children to put the battery in mouth, the electrolyte in the battery is poisonous.
- Do not allow children to touch the small fittings. Otherwise, suffocation or gullet jam can be caused if children swallow the small fittings.

Operating Environment

- Remember to follow any special regulations in force applied in the area you are in, and always switch off your phone whenever it is forbidden to use it, or when it may cause interference or danger. When connecting the phone or any accessory to another device, read its user's guide for detailed safety instructions. Do not connect incompatible products.
- Like with other mobile radio transmitting equipment, users are recommended to use the equipment in the normal operating position (held to your ear with the antenna pointing over your shoulder).This advice for the satisfactory operation of the equipment and for the safety of personnel.

Battery

- Never use a charger or battery that is damaged in any way.
- Use the battery only for its intended purpose.
- If you use the phone near the network's base station, it uses less power. Talk and standby time are greatly affected by the signal strength on the cellular network and the parameters set by the network operator.
- Your device is powered by a rechargeable battery. The full performance of a new battery is achieved only after two or three complete charge and discharge cycles.
- Battery charging time depends on the remaining battery charge, the type of battery, and the charger used. The battery can be charged and discharged hundreds of times, but it will gradually wear out. When the operation time is noticeably shorter than normal, it is time to buy a new battery.
- If the battery left unused, a fully charged battery will discharge itself over time.
- Extreme temperatures will affect the charging capacity of your battery.
- Do not leave the battery in hot or cold places because the capacity and lifetime of the battery will be reduced. Try to keep the battery at room temperature. A phone with a hot or cold battery may not work temporarily, even when the battery is fully charged. Li-ion batteries are particularly affected by temperatures below 0°C (32°F).
- Use only approved batteries and chargers. Disconnect the charger from the power source when it is not in use. Do not leave the battery connected to a charger for more than a week, since overcharging may shorten its life.
